Dear Hiring Team,

I'm a frontend developer and design engineer with 15+ years across enterprise marketing websites, e-commerce, and recent SaaS work. I work across design, development, and marketing, turning Figma concepts and business goals into accessible, maintainable web experiences.

At Imagine Learning, I progressed from Senior Designer to UI/UX Designer/Developer and Marketing Web Developer. I managed 13 WordPress sites and one custom CMS property, led two Shopify migrations (AOP.com and IgniteChristianAcademy.com), and built reusable design systems across HTML/CSS, Liquid, and email. My Master Blocks system cut landing-page production time by 40% across more than 50 conversion-focused pages while giving marketing teams components they could edit and reuse. I also used A/B testing and heatmap data to guide improvements and mentored 12+ team members.

More recently, I launched CyWire, a B2B AI platform, in three months using Next.js, React, TypeScript, Supabase, and Vercel. I designed its structured-output system and built the visual builder, knowledge base, and team workspaces. At TopWebWorks, I built a design system for the marketing site and two reusable Next.js component systems for client sites, alongside lead-capture and follow-up workflows.

I'm looking for a full-time role where I can contribute as part of a collaborative team. I bring hands-on frontend development, a design background, experience with CMS and e-commerce platforms, and a habit of building reusable systems that help teams ship better work. I'd welcome the chance to discuss how I could contribute to your team.

Sincerely,
Brett Snyder
